SUMMARY

Engineering Technology student at San José State University concentrating in Computer Network System Management, with hands-on experience in network engineering, security monitoring, Linux administration, and AI security. CompTIA Security+ certified. Seeking part-time or Summer 2027 internships in cybersecurity, network engineering, IT, and AI security.

EDUCATION

Bachelor of Science (B.S.) in Engineering Technology *Expected May 2029*

Concentration in Computer Network System Management • Minor in Business Management

Pursuing the Human-Centered Artificial Intelligence Certificate, San José State University

San José State University, San Jose, CA • Cumulative GPA: 3.96 • Dean's Scholar

Member, Network Engineering Technology Society (NETS)

TECHNICAL SKILLS

Networking & Security: LAN/VLAN segmentation, Layer-3 switching, ACLs, AAA/RADIUS authentication, IDS, IPSec VPN, DHCP, DNS, TCP/IP & OSI model protocols, subnetting, firewalls

Programming & AI Development: Python (currently learning, TECH 30); Linux command line. Familiar from AI-assisted projects (code reviewed and tested by me): JavaScript/HTML/CSS, C++ (Arduino), FastAPI/REST APIs, Gemini API, Google AI Studio, multi-agent framework design, prompt-injection screening

Security Tools & OS: Kali Linux, Metasploitable, Wazuh SIEM, Cisco Packet Tracer, Nmap, Git/GitHub (network documentation & version control); Windows and Linux administration (CLI, file systems, storage configuration, permissions)

Hardware & PC Assembly: PC assembly from individual components; component compatibility research and parts sourcing; hardware replacement and upgrades

Certification: CompTIA Security+ ce (SY0-701) — CompTIA • Issued July 2026 • Expires July 2029

PROJECT EXPERIENCE

Segmented Enterprise Network — Cisco Packet Tracer Lab *July – August 2026*

github.com/jaredlomeli-sjsu/packet-tracer-security-plus-lab

- Designed a three-VLAN enterprise network with Layer-3 switching, inter-VLAN ACLs, and a site-to-site IPSec VPN linking two sites; validated end-to-end connectivity and ACL enforcement across all zones with ping, tracert, and ipconfig.
- Configured AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a honeypot across 10+ network devices via Cisco IOS CLI, enforcing defense-in-depth and centralized intrusion visibility across all three VLANs.
- Documented the build in a GitHub README (diagram, VLAN/IP table, configs) mapped to Security+ SY0-701.

Offensive and Defensive Security Lab — VirtualBox + Kali Linux *July – August 2026*

github.com/jaredlomeli-sjsu/linux-learning/tree/main/kali-metasploitable-wazuh-linux

- Built an isolated penetration-testing lab in VirtualBox (Kali Linux, Metasploitable 2, Wazuh SIEM); completed 15 hands-on exercises across all five Security+ domains, including enumeration and exploitation with Nmap and Metasploit.
- Deployed Wazuh SIEM with rule-based correlation and File Integrity Monitoring, detecting all 3 self-directed simulated attacks in under 5 minutes each while practicing alert triage and incident response.

Security+ SY0-701 Interactive Study Site — Built in Public *June – September 2026*

securityplus-studyguide.vercel.app • github.com/jaredlomeli-sjsu/comptia-secplus-study-guide

- Designed and built, with AI assistance (Claude), a study site with 11 chapters, an 800-question bank across all five exam domains, 50 performance-based labs, and a 1,090-term glossary; used it to pass the exam.
- Built a simulated Linux shell lab (virtual filesystem, 8 lessons, 5 security challenges) and an in-browser AI study assistant that sends no data to a server, under a strict same-origin Content-Security-Policy.
- Developed publicly on GitHub (49 commits) with automated jsdom tests of the quiz and every Linux lesson.

IT Helpdesk Triage Agent — Google/Kaggle Generative AI Intensive Capstone *July 2026*

github.com/jaredlomeli-sjsu/google-kaggle-5day-intensive

- Built, with AI assistance (Claude), a multi-agent IT helpdesk triage system on Google ADK 2.0 with a custom MCP tool server; auto-resolved 12 of 20 test tickets and flagged 8 for escalation.
- Added a pre-LLM screening layer that flags prompt-injection and phishing attempts before ticket text reaches the model.

Simon Says Memory Game — Arduino, TECH 60 Final (Team) *October 2026*

- Built a team memory game on an Arduino UNO R3 (4 LEDs, 4 debounced buttons, buzzer), wiring the circuit myself and using AI-assisted C++ code; tested it first in the Wokwi simulator, then wired it on a breadboard.

PROFESSIONAL EXPERIENCE

Parking Attendant / Team Mobile — SAP Center at San Jose, San Jose, CA *Nov 2023 — June 2026*

- Coordinated traffic flow for events of up to 17,000 attendees using PCMS digital signage and two-way radio.
- Trained 15+ new attendants on procedures, signage systems, and radio protocols using shadowing then reverse-shadowing (new hires performed tasks while I supervised), cutting ramp-up time from four shifts to two.
- Directed vehicle staging and lot capacity by radio, processing about 100 vehicles per hour through sold-out events.
