Hiring Team
Lawrence Livermore National Laboratory
Livermore, CA

Dear Hiring Team,

I'm writing to apply for the Computing Summer Intern - Undergraduate position. I'm an Engineering Technology student at San José State University, concentrating in Computer Network System Management, with a 3.96 GPA, Dean's Scholar standing, and the CompTIA Security+ certification. The cyber defense work in your posting is the area I'm building toward, and I'd like to spend the summer supporting researchers at the Laboratory.

Most of my hands-on work has been in defending systems and measuring whether the defenses work. I built an isolated lab in VirtualBox with Kali Linux, Metasploitable, and a Wazuh SIEM, and ran 15 exercises across the Security+ domains. I then ran three simulated attacks of my own against it and checked whether Wazuh caught each one. It detected all three in under five minutes, using rule-based correlation and file integrity monitoring. That is the same loop your posting describes: gather data, analyze it, and report what it shows.

I also built an IT helpdesk triage agent on Google ADK for the Google/Kaggle Generative AI Intensive Capstone, with a screening layer that flags prompt-injection and phishing attempts before ticket text reaches the model. I tested it against 20 tickets and wrote 17 unit tests. I'm still a beginner in Python, and I'm formalizing it now in TECH 30, but I learn quickly and I document what I do. My network and security projects each have a GitHub README with diagrams, tables, and configuration steps so another person can reproduce the work.

Presenting work and working in a team are also familiar to me. At SAP Center I coordinated traffic for events of up to 17,000 attendees by radio, and I trained more than 15 new attendants, cutting their ramp-up time from four shifts to two. I'm comfortable explaining technical ideas, and I use Word, Excel, and PowerPoint regularly for coursework and documentation.

I'd welcome the chance to learn from your scientists and technical staff, attend the weekly seminars, and present what I've done. Thank you for considering my application. My resume is attached.

Sincerely,

Jared Lomeli
