San José State University Information Technology Services (ITS), Office of the CIO AI DevOps Team

Dear ITS AI DevOps Hiring Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and this internship is close to exactly the kind of AI solutions I want to spend my time building. This past summer I built an IT Helpdesk Triage Agent for the Google/Kaggle Generative AI Intensive Capstone: a multi-agent system on Google ADK 2.0 with a custom MCP tool server that routes tickets to auto-resolve, escalation, or human review. I used Python to build the agent logic and pre-LLM screening layer, worked with the Gemini and OpenAI APIs to route conversations, and kept everything under Git with my own review process before merging changes. I'm formalizing that Python background right now in TECH 30 at SJSU, which has already sharpened how I structure the code. The screening layer catches prompt-injection and phishing attempts before they ever reach the model, and the whole system is backed by 17 unit tests and runs fully offline.

That project came out of a security mindset more than a software one. I hold CompTIA Security+, and I built a three-VLAN enterprise network in Packet Tracer with ACLs, AAA/RADIUS, an IDS sensor, and a site-to-site IPsec VPN, plus a separate offensive/defensive lab in Kali Linux and Wazuh. I think about how something could break or be misused before I think about what it should do, which is basically what "responsible AI" means in your posting.

What stands out about this internship is the range — student-facing assistants on one end, decision support and data engineering work under the CFO's office on the other, all built on the same data technologies and analytical workflows. I like that a lot of it is about continuing development on solutions that are already helping people, not just building something new and walking away. Outside of school, I spent two years running logistics for 17,000-person events at SAP Center and training new hires, so I'm used to staying organized when things move fast.

Sincerely, Jared Lomeli
