Rysun Labs Inc. Information Technology Data Engineer — Internship

Dear Rysun Labs Hiring Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and this role caught my eye because it sits right at the intersection of AI, data, and actually talking to people about what they need — not just building in isolation. This past summer I built an IT Helpdesk Triage Agent for the Google/Kaggle Generative AI Intensive Capstone: a multi-agent system on Google ADK 2.0 with a custom MCP tool server that routes tickets to auto-resolve, escalation, or human review. I used Python to build the agent logic, worked with the Gemini and OpenAI APIs to wire the routing together, and kept everything under Git with my own review process before merging changes. A pre-LLM screening layer catches prompt-injection and phishing attempts before they hit the model, and the whole thing runs on 17 unit tests, fully offline.

I also come at this from the infrastructure side. I hold CompTIA Security+, and I designed a three-VLAN enterprise network in Packet Tracer with ACLs, AAA/RADIUS authentication, an IDS sensor, and a site-to-site IPSec VPN — plus a separate offensive/defensive lab in Kali Linux and Wazuh. That background makes me comfortable thinking about how AI and data systems actually get deployed and supported, not just how they're built.

The client-facing part of this role is where my two years at SAP Center come in. I coordinated logistics for events with up to 17,000 attendees and trained 15+ new hires, which meant building trust with strangers fast and staying steady when things changed by the minute — good practice for walking into a client site and figuring out what they actually need. I'd welcome the chance to bring that mix to Rysun Labs.

Sincerely, Jared Lomeli
