

JARED LOMELI

San Jose, CA 95120 • (408) 892-6485 • jaredlomelicsm@gmail.com • [linkedin.com/in/jaredlomelicsm](https://www.linkedin.com/in/jaredlomelicsm) • github.com/jaredlomeli-sjsu

SUMMARY

Engineering Technology student at San José State University concentrating in Computer Network System Management, with hands-on experience in enterprise network design, offensive and defensive security labs, and AI agent development. CompTIA Security+ certified. Seeking an IT Support, Network/NOC, or SOC Analyst internship.

EDUCATION

Bachelor of Science (B.S.) in Engineering Technology

Expected May 2029

Concentration in Computer Network System Management

Minor in Business Management

San José State University, San Jose, CA

Cumulative GPA: 3.97 • Dean's Scholar

Member, Network Engineering Technology Society (NETS)

TECHNICAL SKILLS

Networking & Security: LAN/VLAN segmentation, Layer-3 switching, ACLs, AAA/RADIUS authentication, IDS, IPsec VPN, DHCP, TCP/IP & OSI model protocols, subnetting, firewalls

Programming & AI Development: Python (beginner) — scripting, FastAPI, REST APIs; Gemini API; Google AI Studio; multi-agent framework design

Security Tools & OS: Kali Linux, Metasploitable, Wazuh SIEM, Cisco Packet Tracer, Nmap, Git/GitHub (network documentation & version control); Windows and Linux administration (CLI, file systems, storage configuration, permissions)

Certification: CompTIA Security+ ce (SY0-701) — CompTIA • Issued July 2026 • Expires July 2029

PROJECT EXPERIENCE

Segmented Enterprise Network — Cisco Packet Tracer Lab

July – August 2026

github.com/jaredlomeli-sjsu/packet-tracer-security-plus-lab

- Designed a three-VLAN enterprise network (Management/IT, Employees, Servers/Wireless) with Layer-3 switching, inter-VLAN ACLs, and a site-to-site IPsec VPN linking two sites, validating end-to-end connectivity and ACL enforcement with ping, tracer, and ipconfig testing across all zones.
- Configured AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a honeypot across 10+ network devices via Cisco IOS CLI, enforcing defense-in-depth and centralized intrusion visibility across all three VLANs.
- Authored a structured GitHub README — network diagram, VLAN/IP table, and per-objective configuration breakdown — mapping the build to Security+ SY0-701 segmentation, AAA, IDS, IPsec VPN, and 802.1X wireless objectives for at-a-glance reviewer verification.

IT Helpdesk Triage Agent — Google/Kaggle Generative AI Intensive Capstone

July 2026

github.com/jaredlomeli-sjsu/google-kaggle-5day-intensive

- Developed a multi-agent IT helpdesk triage system on Google ADK 2.0 with a custom MCP tool server that routes tickets to auto-resolve, security escalation, or human review; validated against 20 test tickets, auto-resolving 12 and correctly flagging 8 anomalies for escalation.
- Built a Python pre-LLM screening layer using keyword and dollar-amount pattern matching to flag prompt-injection and phishing attempts before ticket text reaches the model, running fully offline with no API key required.

Offensive and Defensive Security Lab — VirtualBox + Kali Linux

July – August 2026

github.com/jaredlomeli-sjsu/linux-learning/.../kali-metasploitable-wazuh-linux

- Built an isolated penetration-testing lab in VirtualBox hosting Kali Linux, Metasploitable 2, and a Wazuh SIEM server; completed 15 hands-on exercises spanning all five Security+ domains plus a Wazuh bonus track.
- Executed enumeration, exploitation, and post-exploitation workflows against Metasploitable 2 using Nmap, Metasploit, and manual techniques.
- Deployed Wazuh SIEM with rule-based correlation to detect brute-force attempts and File Integrity Monitoring (FIM) events, detecting all 3 self-directed simulated penetration attempts in under 5 minutes each while practicing alert triage and incident response.

PROFESSIONAL EXPERIENCE

Parking Attendant / Team Mobile — SAP Center at San Jose, San Jose, CA

Nov 2023 — June 2026

- Coordinated real-time traffic flow for events of up to 17,000 attendees, operating PCMS digital signage and two-way radio communications across multiple parking lots.
- Trained 15+ new attendants on standard operating procedures, signage systems, and radio protocols through direct shadowing followed by reverse-shadowing (new hires performed tasks while I supervised and assisted), cutting ramp-up time from four shifts to two.
- Directed vehicle staging and lot-capacity management with real-time radio coordination during peak arrival and departure windows, processing approximately 100 vehicles per hour while keeping entry and exit lanes clear through sold-out events.
