

ECOTECH (Best Developed)

Design 2/2 Green for leaves

Mission Statement 2/2

Social Impact 2/2 Park Rangers and ecologist partnerships for biodiversity.

Originality 2/2 Replants invasive species, automatic robot "Terry"

I would grade that brand and presentation 10/10 due to the very original and impactful idea of "Terry", the automatic robot who harvests and replants invasive species of plants. The webpage was following a greenery and simplistic theme that connects to their mission and values. Their social impact has been huge in their connections with park rangers, ecologists, and other organizations where they donate their 'Terry's' for a price to help clear out invasive plants.

QUICK R.E.C

Mission Statement 2/2

Originality 2/2 Heals injuries using mini robot

Intent 2/2 Avoid pain, disability, time-off, etc

Visual Design 1/2 Good design, although they didn't speak about it.

I like the presentation and how their product works. I thought it was very interesting and I liked the concept. The intent was to help the consumers and their pain and injuries as well as getting them back into their lifestyles after injury. My only problem with it was that they didn't explain their visual design and their logo was lackluster. 9/10

SKY SKATER

Mission Statement 2/2

Originality/Implementation 2/2

Visual 2/2

Collaboration 2/2

Social Impact 2/2

I give our project a 10/10. Everyone contributed to make the project as good as possible. Some of us focused more on information while others focused on the video and website but in all, we all contributed equally and presented equally. Our visuals were connected to the product and brand and our mission and social impact was clear.

CLIMATE-CHECK

Design 2/2 Colors of Earth and Color of Life (Gold)

Mission 2/2 Global Waste, **Pollution**, biodiversity

Originality 2/2 Smart Mirror - Scans items that you buy and tracks carbon footprint

Social Impact ½ Good idea, good intentions, lacking social impact and changes. (More informational)

I would grade the presentation a 9/10. The only part I would critique is their social impact which was lacking information. Their app seems to be an informational program for the consumers but I didn't see where their company contributes to the community in many ways.

SEA CYCLE

Reading off of presentation

Design ½ lack of color, good images

Mission Statement 2/2 Recycling, removing plastic/waste from ocean

Intent/Social Impact 2/2 Want to inspire government, collaborate with ocean cleaners, nonprofit organizations, etc.

Originality ½ Cleaning oceans? Where is the product? Technology?

I would give the group a 8/10. I liked their brand and social impact as well as their mission statement and intent. Although I didn't see or couldn't understand what their product was or how it worked. It seemed like their brand was based on cleaning the oceans and contributing to that cause

PAWS FOR CAWS

Design 2/2 Nice colors and logo. Targeted towards younger generations

Mission Statement 2/2 Animal rights and shelter. Provide shelters to animals in need

Social Impact ½ Simple/Community Driven Solutions, small actions from volunteers? Short videos, sponsored community innovation events

Originality ½ Shelters for Animals

8/10. I understand that the simplicity of the website was due to their target audience being the younger generation, but that doesn't dismiss the lack of information that the website contained. I liked their design and mission statement but I felt that their originality and social impact were lacking and simple.
