CISA (Cybersecurity and Infrastructure Security Agency)
Cyber and IT Intern — Volunteer Student Intern Program

Dear CISA Student Programs Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and CISA's mission — defending the systems the country actually runs on — is the kind of work I want my career built around. I hold CompTIA Security+, and I designed a three-VLAN enterprise network in Cisco Packet Tracer with inter-VLAN ACLs, AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a site-to-site IPsec VPN across more than ten devices — the same segmentation-and-defense-in-depth thinking behind a lot of CISA's own guidance to critical infrastructure operators.

I've also built and run an isolated penetration-testing lab (Kali Linux, Metasploitable 2, and a Wazuh SIEM server) covering all five Security+ domains, where I deployed rule-based correlation to detect brute-force attempts and file-integrity events, catching all three of my own simulated attacks in under five minutes each while practicing alert triage. Separately, I built a multi-agent IT Helpdesk Triage system on Google ADK 2.0 with a Python pre-LLM screening layer that flags prompt-injection and phishing attempts before they reach the model — the kind of automation-plus-security work I understand CISA interns get exposure to on projects like phishing classification and Linux forensics automation.

Two years at SAP Center rounded out the coordination side: I trained 15+ new hires on procedures and radio protocols and managed real-time vehicle staging for events of up to 17,000 attendees, so I'm used to staying calm and communicating clearly under pressure. I'd welcome the chance to bring that mix of technical grounding and teamwork to CISA's Volunteer Student Intern program.

Sincerely,
Jared Lomeli
