Re: As-Needed Student Intern II – IT / System Support

Dear Hiring Manager,

I'm heading into my second year at San José State University studying Engineering Technology with a concentration in Computer Systems Network Management. The System Support Intern role is exactly what I've been building toward.

Desktop imaging, Level 1 troubleshooting, hardware inventory, IT security best practices. That's not a wish list – that's the work I've been preparing for through hands-on labs and self-directed study. I'm currently deep in CompTIA Security+ prep (target exam: August 2026), covering access control, vulnerability management, and security fundamentals every week. My coursework covers TCP/IP, the OSI model, and Windows and Linux fundamentals. And I hold a valid California driver's license.

But here's what the résumé doesn't fully capture: I already know what it's like to be the person people come to when something's broken. At SAP Center, I ran PCMS digital signage systems and two-way radio communications for events with up to 17,000 attendees. One misconfigured sign, one radio blackout – and traffic backs up for blocks. I got fast at diagnosing under pressure, explaining the fix plainly to people who just need it working, and documenting what happened so the next person doesn't have to figure it out from scratch. I also trained incoming staff on our tech workflows and equipment procedures. That's support work. It just happened at a stadium.

I'm available on a flexible, as-needed schedule. My resume and proof of enrollment are attached.
