Google

Software Engineering Intern / Site Reliability Intern

Dear Google Recruiting Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and I've already been building on Google's own tools before this internship existed for me: this past summer I built a multi-agent IT Helpdesk Triage system on Google ADK 2.0 for the Google/Kaggle Generative AI Intensive Capstone, with a custom MCP tool server that routes tickets to auto-resolve, escalation, or human review, backed by a Python pre-LLM screening layer that flags prompt-injection and phishing attempts before they reach the model. Seeing how a well-designed distributed system holds up under adversarial input is exactly the kind of problem I want to keep working on.

On the infrastructure and security side, I hold CompTIA Security+ and designed a three-VLAN enterprise network in Cisco Packet Tracer with inter-VLAN ACLs, AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a site-to-site IPSec VPN across more than ten devices. I've also built and run an isolated penetration-testing lab (Kali Linux, Metasploitable 2, and a Wazuh SIEM server) where I deployed rule-based correlation to detect brute-force attempts and file-integrity events, catching all three of my own simulated attacks in under five minutes each. That mix of hands-on networking, security, and Python scripting is what draws me to Site Reliability Engineering as much as Software Engineering — I like systems that have to stay correct and available under pressure, not just work once.

Two years at SAP Center rounded out the collaboration side: I trained 15+ new hires on procedures and radio protocols and coordinated real-time traffic for events of up to 17,000 attendees, so I'm used to staying calm and communicating clearly when things move fast. I'd welcome the chance to bring that mix of technical grounding and teamwork to Google this summer.

Sincerely,

Jared Lomeli
