Honeywell Aerospace
Cyber Security Summer Intern (2027)

Dear Honeywell Aerospace Hiring Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and Honeywell Aerospace's reach — systems on 90% of the world's aircraft — is exactly the kind of stakes that drew me to cybersecurity in the first place: when the infrastructure matters that much, the security around it has to be built in, not bolted on. I hold CompTIA Security+, and I designed a three-VLAN enterprise network in Cisco Packet Tracer with inter-VLAN ACLs, AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a site-to-site IPSec VPN across more than ten devices — the same segmentation-and-access-control thinking I'd bring to analyzing and hardening security protocols on your team.

I've also built and run an isolated penetration-testing lab (Kali Linux, Metasploitable 2, and a Wazuh SIEM server) covering all five Security+ domains, where I deployed rule-based correlation to detect brute-force attempts and file-integrity events — catching all three of my own simulated attacks in under five minutes each while practicing alert triage. On the data/AI side, I built a multi-agent IT Helpdesk Triage system on Google ADK 2.0 for the Google/Kaggle Generative AI Intensive Capstone, with a Python pre-LLM screening layer that flags prompt-injection and phishing attempts before they reach the model — work that sits right at the intersection of cybersecurity and data science your team is looking to bridge.

Two years at SAP Center rounded out the collaboration side: I trained 15+ new hires on procedures and radio protocols and coordinated real-time traffic for events of up to 17,000 attendees, so I'm used to staying calm and communicating clearly when things move fast. I'd welcome the chance to bring that mix of technical grounding and teamwork to Honeywell Aerospace this summer.

Sincerely,
Jared Lomeli
