Hiring Team

Midpeninsula Regional Open Space District

330 Distel Circle, Los Altos, CA 94022

Dear Hiring Team,

I am writing to apply for the Information Systems & Technology Intern position with Midpeninsula Regional Open Space District. I am a Computer Network System Management student in the Engineering Technology Department at San José State University, and Midpen's mission to protect open space while running a lean, hands-on IT operation is exactly the kind of environment where I want to build my early technical career.

My coursework and personal projects have given me a working foundation in the areas this role touches day-to-day. I have built Cisco Packet Tracer labs covering VLANs, ACLs, AAA authentication with RADIUS and TACACS+, IDS/SPAN monitoring, syslog, and site-to-site IPsec VPNs, which lines up directly with the network infrastructure and services knowledge the posting calls for. I hold the CompTIA Security+ certification and maintain an open-source Security+ study guide with labs, a 500-question practice bank, and diagrams, so I am comfortable both applying security concepts and explaining them clearly to others. I also built a SOC dashboard using Grafana and PostgreSQL over the CIC-IDS2017 intrusion dataset, which gave me hands-on experience turning raw network security data into something a team can actually monitor and act on.

Beyond the technical side, I am used to balancing coursework, certifications, and independent projects at the same time, and I bring that same organization and follow-through to hands-on support work. I would welcome the chance to bring this mix of networking fundamentals, security focus, and practical problem-solving to Midpen's IST team, and I am glad to work across the Los Altos office and the field offices as needed.

Thank you for your consideration. I look forward to the opportunity to discuss how I can contribute to Midpen's IT operations.

Sincerely,

Jared Lomeli
