ONEOK Inc. IT Applications Team IT Applications Professional Intern — Tulsa, OK

Dear ONEOK IT Applications Hiring Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and I like this internship because it isn't locked into one lane — it touches infrastructure, applications, and data security all at once, which matches how I've been building my own experience. This past summer I built an IT Helpdesk Triage Agent for the Google/Kaggle Generative AI Intensive Capstone: a multi-agent system on Google ADK 2.0 with a custom MCP tool server that routes tickets to auto-resolve, escalation, or human review, backed by 17 unit tests and a screening layer that catches prompt-injection and phishing attempts before they reach the model. It's essentially a support system for a support system, which taught me a lot about how IT applications actually get used day to day.

On the infrastructure side, I hold CompTIA Security+ and designed a three-VLAN enterprise network in Cisco Packet Tracer with inter-VLAN ACLs, AAA/RADIUS authentication, an IDS sensor, centralized syslog, and a site-to-site IPSec VPN across more than ten devices — the kind of segmentation and access control that operational efficiency and data security projects usually come down to. I'm comfortable in both Windows and Linux day to day, from the CLI to file permissions, and I keep my project work under Git so changes stay tracked and reversible.

Two years at SAP Center rounded out the coordination side: I trained 15+ new hires on procedures and radio protocols and managed vehicle staging during sold-out events, so I'm used to troubleshooting on the fly and working across a team when things don't go according to plan. I'd like the chance to bring that mix of infrastructure, applications, and people skills to ONEOK this summer.

Sincerely, Jared Lomeli
