ONEOK Inc. Cyber Security Team Cyber Security Intern — Tulsa, OK

Dear ONEOK Cyber Security Hiring Team,

I'm an Engineering Technology student at San José State concentrating in Computer Network System Management, and protecting the systems behind critical infrastructure is exactly the kind of work I want to build a career around. I hold CompTIA Security+ (SY0-701), and this past summer I ran an offensive/defensive security lab in Kali Linux and Metasploitable, working through enumeration, exploitation, and post-exploitation against a vulnerable host with Nmap and Metasploit. I deployed Wazuh SIEM on top of it to correlate alerts and practice actual triage on brute-force attempts and file integrity events, so I've spent real time on both sides of an attack before ever stepping into a SOC.

Before that lab, I designed a three-VLAN enterprise network in Cisco Packet Tracer with inter-VLAN ACLs, AAA/RADIUS authentication, an IDS sensor, centralized syslog, a honeypot, and a site-to-site IPSec VPN linking two sites — defense-in-depth applied across more than ten devices. I documented the whole build in a public repository mapped back to the Security+ domains, since I think a finding is only useful if someone else can read it and act on it, which sounds close to the reporting and knowledge-sharing part of this internship.

That instinct to explain things clearly carried over from two years at SAP Center, where I trained 15+ new hires on procedures and communication protocols while coordinating logistics for events with up to 17,000 attendees. I'm comfortable learning fast in a live environment and then turning around and teaching it to someone else, and I'd like the chance to bring that to ONEOK's Cyber Security team this summer.

Sincerely, Jared Lomeli
