Hiring Manager

Rising Up Together

Dear Hiring Manager,

I am writing to apply for the IT Support Intern position at Rising Up Together. I am a first-year Engineering Technology student at San Jose State University studying Computer Systems Network Management, and I am currently pursuing my CompTIA Security+ certification. This role lines up well with my technical background and my experience helping people work through technology problems.

I use Microsoft 365 tools including Teams and Outlook regularly, and I have a solid understanding of multi-factor authentication from both a user and technical standpoint. In my lab work, I have configured AAA/RADIUS authentication systems and worked through account access and security scenarios in simulated environments. I am comfortable explaining technical concepts to people who are less familiar with technology. I practiced this directly at SAP Center, where I trained new staff on digital systems and standard operating procedures, which is very similar to the onboarding and documentation responsibilities described in this role.

Outside of school, my security projects are all self-directed. I built a segmented enterprise network in Cisco Packet Tracer, set up a virtual offensive/defensive security lab using Kali Linux and Wazuh SIEM, and completed a multi-agent helpdesk system in Python. Working through those projects independently taught me how to troubleshoot methodically, document what I find, and think ahead to prevent the same issues from coming up again. That same mindset is what I would bring to supporting your team.

I am genuinely interested in contributing to an organization that works with youth, and I would welcome the chance to speak with you. I am flexible on scheduling and available at your convenience.

Sincerely,

Jared Lomeli
