Hiring Manager

Western Digital

Dear Hiring Manager,

I'm writing to apply for the Fall 2026 IT Applications Intern role on your Mfg./MES team. I'm a first-year Engineering Technology student at San Jose State University, studying Computer Systems Network Management. I'm also currently working through my CompTIA Security+ certification.

Your posting asks for someone who can pick up automation and IT tools quickly and communicate clearly with a team. That's exactly how I like to work.

I've spent the last few months building Python projects on my own time. One of them is a multi-agent helpdesk system using FastAPI and Google's Gemini API, with a supervisor agent and REST endpoints that route requests to the right place.

That project taught me how to break a workflow into smaller pieces and automate the handoffs between them. It's close to the kind of transformation work your MES team is doing.

I also build IT infrastructure labs on my own. I set up a segmented enterprise network in Cisco Packet Tracer with VLANs, inter-VLAN ACLs, and a site-to-site VPN, and I run a security lab with Kali Linux and Wazuh SIEM to practice log analysis.

None of that came from a class assignment. I did it because I wanted to understand how the pieces fit together, and that curiosity is what draws me to this internship.

At SAP Center, I trained new staff on digital signage systems and standard procedures. That means I know how to document a process clearly enough for someone else to follow it, which

matters when you're rolling out new self-service tools to a team that didn't build them.

I'd like the chance to talk with you about this role. I'm available starting this fall and can work around your team's schedule.

Sincerely,

Jared Lomeli
