

My Introduction

Jared Lomeli

08/25/2026

LET'S GET TO KNOW ME A LITTLE BETTER 🍌

This is my introductory slideshow to express myself and answer some questions regarding to TECH 15

Lets Begin

What I want to Learn in TECH 15? And Why?

I want to take TECH 15 firstly because it is a requirement for my major (CNSM). In addition, I am excited to hear some mentor's perspectives about the current workforce and the ever changing environment surrounding technology. Learning about some internship opportunities and improving my chances at landing one through resume and cover letter building is also an aspect of the class I am looking forward too.

TOP 3 COMPANIES

1. CISCO: My core career focus at the moment is working on networks and going into cybersecurity. After learning recently that SJSU is highly connected with CISCO, I am excited to learn about the Apprenticeship opportunities they have to offer.
2. CrowdStrike: I look up to my cousin as a mentor and we are close as friends as well. He helped me build my first PC and jumpstarted my interest in technology. After learning about the concept of cybersecurity, I found a real interest in it and spent the previous summer pursuing my Security+ Certification.
3. Anthropic: I don't have an ideal career for this company. I feel it would be very cool to train an AI model such as Opus or Fable.

IDEAL CAREER AND WHY?

I am not confirmed on this path, however...

My dream career is offensive cyber security such as a penetration tester.

Or I would love to be a penetration tester for my company and then join back with the defensive team to patch the vulnerabilities in the current systems.

u u u

Where do I see myself in 5 years?

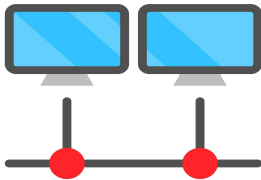

Career

I hope to have landed a few internships and followed in my cousin's footsteps.

The goal is to be in my ideal company with room to grow upward in the company.

CURRENT SKILL SET

- COMPTIA SEC+ Certified
- Intermediate AI prompt engineering
- Beginner Experience with LINUX
