Hiring Team
Hewlett Packard Enterprise
San Jose, CA

Dear Hiring Team,

I'm writing to apply for the Cloud Engineer Intern position in San Jose. I'm a Computer Network System Management student in the Engineering Technology program at San José State University with a 3.97 GPA, and I hold the CompTIA Security+ certification. The hybrid schedule works well for me, since I live in San Jose and can be on-site two days a week.

Cloud systems run on networks and Linux servers, and that's where my hands-on experience is. I'm comfortable working in Linux from the command line, including file systems and permissions, and I built an isolated lab in VirtualBox with Kali Linux, Metasploitable, and a Wazuh SIEM server. I deployed and configured the SIEM, set up rule-based detection for brute-force attempts and file integrity events, and tested it by running my own simulated attacks. It caught all three attempts in under five minutes each. That project taught me to deploy a system, test it, and troubleshoot it until it works reliably and securely, which matches what your posting describes.

I also like to automate repetitive work. I built an IT helpdesk triage agent in Python on Google's Agent Development Kit, with a custom MCP tool server, that routes tickets to auto-resolve, security escalation, or human review. I tested it against 20 tickets, and it resolved 12 and flagged 8 for escalation. I added a screening layer that catches prompt-injection and phishing attempts before the text reaches the model. I'm still early in my programming, but I've learned how to break a process into steps and automate the handoffs.

For networking, I designed a segmented enterprise network in Cisco Packet Tracer with VLANs, Layer-3 switching, ACLs, AAA/RADIUS authentication, and a site-to-site IPSec VPN across more than ten devices, and I validated connectivity across every zone. I documented each project on GitHub with diagrams and configuration steps, and I use Git for version control.

I haven't worked on a cloud platform in a professional setting yet, and I'd like to learn on the job. I'm curious, I follow through on projects I start, and I pick up new tools quickly. Thank you for considering my application. I would welcome the chance to talk about how I can contribute to your cloud team.

Sincerely,

Jared Lomeli
